Projects

The yolov5 based on the real time automatic number plate and helmet recognition system
In today's busy life, many road accidents are seen and it doesn't take longer to us as a victim. Almost 80% of the road accident fatal occurs due to not wearing the helmet. So, helmet should be worn properly. But from the beginning onwards, a child is trained that it requires a driving force to do some work. For that, it is necessary to enforce the public to wear helmet through fine as per the motor vehicle act of the respective country. To make the fine collection process as automatic one, it is also required to identify the vehicle number plate. In the proposed design, the model is trained with YOLO v5. The dataset collected is annotated and the images along with the labels are fed to YOLO v5 for training and at the end the weight files are created.
